

# **National Library as a Public Sector Metadata Curator - The Finto Ontology Infrastructure**

Matias Frosterus  
16th NKOS Workshop  
Copenhagen 15.10.2015

# The Law on Interoperability between Information Systems in the Public Sector

- In the summer of 2011
- Everyone should follow the definitions and descriptions of interoperability

# The Law on Interoperability between Information Systems in the Public Sector

- In the summer of 2011
- Everyone should follow the definitions and descriptions of interoperability
  - What are these?

# The Law on Interoperability between Information Systems in the Public Sector

- In the summer of 2011
- Everyone should follow the definitions and descriptions of interoperability
  - What are these?
    - No one knows!
    - But they are trying to find out!

# Semantic Interoperability

- Common concepts with explicit meanings and explicit relations
- Common identifiers for common concepts
  - Or mappings between them

# Semantic Interoperability

- Common concepts with explicit meanings and explicit relations
- Common identifiers for common concepts
  - Or mappings between them
- But why a library is doing this?

# The Definitions and Descriptions of Interoperability

- Libraries have a lot to offer to the public sector when it comes to descriptive metadata
  - Granting access to information can be seen as the main function of libraries
- Our project's particular focus has been on the development, publication, and use of controlled vocabularies
  - for the whole public sector

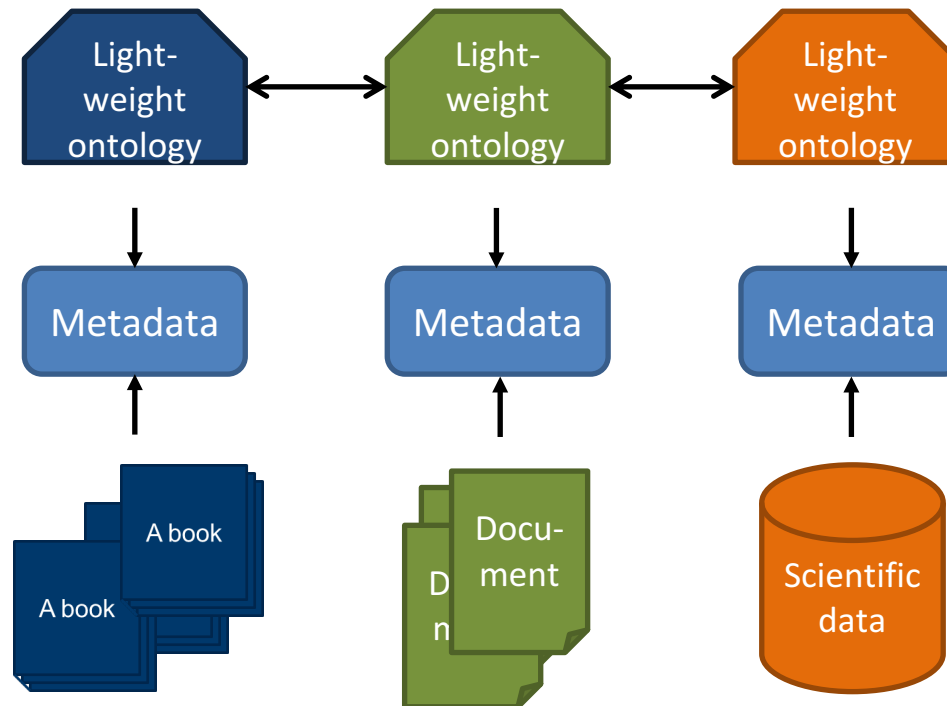

# Semantic interoperability through linked ontologies

# Semantic interoperability through linked ontologies

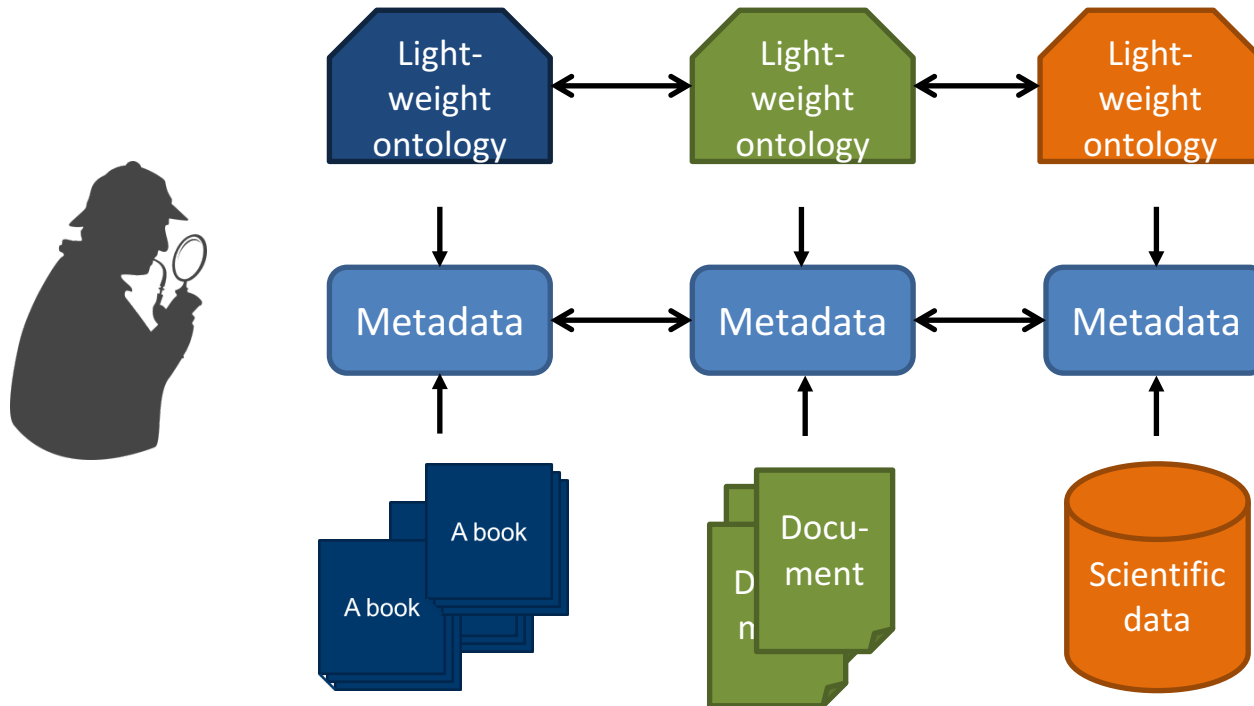

# Semantic interoperability through linked ontologies

# Semantic interoperability through linked ontologies

# **A short interlude on what we mean by "ontologies"**

# Ontology

- Gruber: " An ontology is a description (like a formal specification of a program) of the concepts and relationships that can formally exist for an agent or a community of agents. This definition is consistent with the usage of ontology as set of concept definitions, but more general."

# Ontology

- Gruber: " An ontology is a description (like a formal specification of a program) of the concepts and relationships that can formally exist for an agent or a community of agents. This definition is consistent with the usage of ontology as set of concept definitions, but more general."
- Unfortunately has evolved into two different branches
  - Lots of classes with few relations between them
  - A few classes with a lot of possible relations between them
- Structured Vocabulary: SUMO, YAGO, etc.
  - This is our focus
  - Light-weight ontologies
- Data model: FOAF, CIDOC CRM, etc.

# Other reasons for using the word ontology

- Highlight the difference from traditional thesauri
  - From terms to concepts
    - Multilinguality
    - Linkability
  - Use dereferenceable URIs
  - Machine-processable relations between concepts
    - Complete hierarchy
  - Depicted using RDF

# Other reasons for using the word ontology

- Highlight the difference from traditional thesauri
  - From terms to concepts
    - Multilinguality
    - Linkability
  - Use dereferenceable URIs
  - Machine-processable relations between concepts
    - Complete hierarchy using "is-a" relations
  - Depicted using RDF
- Thesauri can be all of this but it is not widely acknowledged

# Other reasons for using the word ontology

- Highlight the difference from traditional thesauri
- Historical reasons
  - YSO (General Finnish ontology) began its life in OWL in 2003
    - No SKOS yet
  - Meaning of the ontology had not yet solidified even to the current extent

# Other reasons for using the word ontology

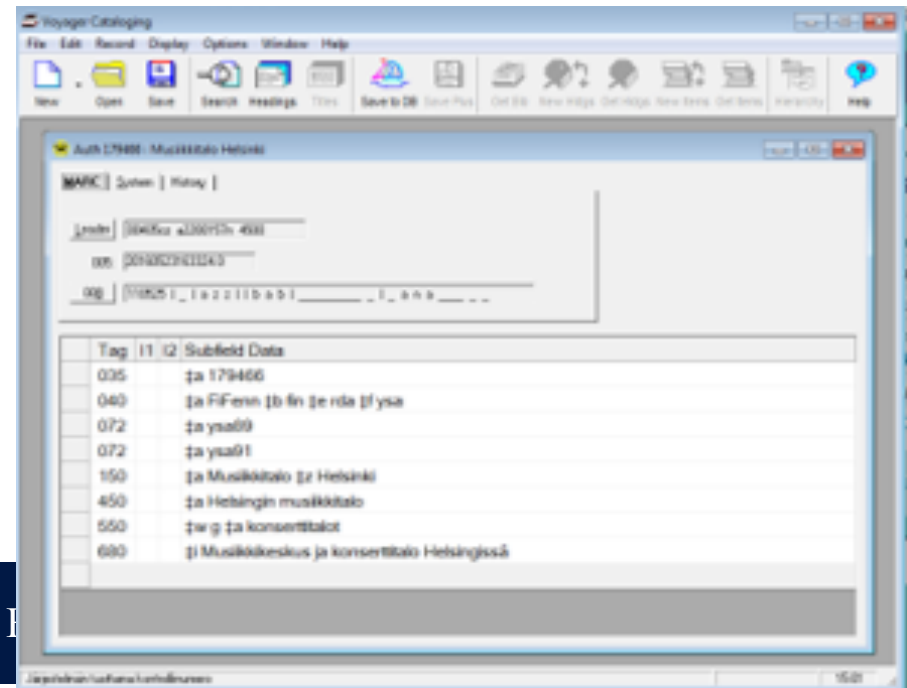

- Highlight the difference from traditional thesauri
- Historical reasons
- Sexyness
  - Easier to find funding for ontologies rather than for "advanced thesauri" or for KOS (sorry!)

# **After that lengthy defense: light-weight ontologies**

# YSO - General Finnish ontology

- National Library's General Finnish thesaurus YSA was/is the most used thesaurus in Finland
  - Developed originally in the 1980's mainly for book indexing
  - Monolingual, has a swedish equivalent Allärs
  - Structure tied to MARC21-format, for example use of MARC-subdivisions

# YSO - General Finnish ontology

- The work started in 2003 to transform YSA to machine readable and multilingual YSO
- Themes
  - From terms to concepts
  - From libraries to wider field
  - From library standards to open linked data standards

# YSO - General Finnish ontology

- Approximately 30 000 concepts
- Trilingual terms for concepts (fi, sv, eng)
- URIs for concept identification (not terms)
- SKOS-format for easy open linked data use
- Complete hierarchical structure from top down
  - Top hierarchy based on a modified version of DOLCE

# YSO as the basis for the Finnish ontology infrastructure

- 14 domain ontologies
  - Ranging from seafaring to museums to military to agriculture to public services
- All built by domain experts and extending YSO
  - The same hierarchy and the same principles
  - Readily linkable, readily interoperable
- A national-level infrastructure
  - Coordinated by the National Library of Finland
  - Funded by the Ministry of Finance and the Ministry of Culture and Education

# Finto service

# Finto

- The aim of Finto is to provide a dependable, centralized, national thesaurus and ontology service
- <http://finto.fi>
- Developed in the National Library of Finland for use in the whole public sector

# Finto

- The aim of Finto is to provide a **dependable**, centralized, national thesaurus and ontology service.

- Fast
- Stable and reliable
- Permanent

# Finto

- The aim of Finto is to provide a dependable, **centralized**, national thesaurus and ontology service.

- One place to publish
- One place to find
- Common APIs
- Easy to switch between resources

# Finto

- The aim of Finto is to provide a dependable, centralized, **national** thesaurus and ontology service.
  - Working with all sorts of organizations with differing needs and capabilities
  - Standards not shackled to the library world

## Welcome to the Finto service!

Finto is a Finnish thesaurus and ontology service, which enables both the publication and browsing of vocabularies. The service also offers [interfaces](#) for integrating the thesauri and ontologies into other applications and systems.

### Available vocabularies and ontologies

#### GENERAL

Allärs - Allmän tesaurus på svenska  
 Finnish Corporate Names  
 KOKO Ontology  
 Metatietosanasto  
 Pondus categories  
 YSA - General Finnish thesaurus  
 YSAn ja YSON käsite-ehdotukset  
 YSO - General Finnish ontology

#### SOCIETY

JUHO - Julkishallinnon ontologia  
 Julkisten palvelujen luokitus  
 JUPO - Finnish Ontology for Public Administration Services  
 KEKO - Ontology for Education for Sustainable Development  
 Korkeakoulujen tutkimustiedonkeruussa käytettävä tieteenalaluokitus  
 LIITO - Liiketoimintaontologia  
 MERO - Merenkulkualan ontologia  
 PUHO - Puolustushallinnon ontologia  
 TSR ontology

# Skosmos

# Skosmos

- The heart beating inside Finto
- Open source SKOS vocabulary browser
  - <http://skosmos.org>
- Publication and use of light-weight ontologies, thesauri and classifications
  - Web interface
  - REST API
  - SPARQL endpoint
- Community
  - <https://groups.google.com/forum/#!forum/skosmos-users>

# How does it work?

- Make your thesaurus into SKOS

# How does it work?

- Put in in a SPARQL triple store

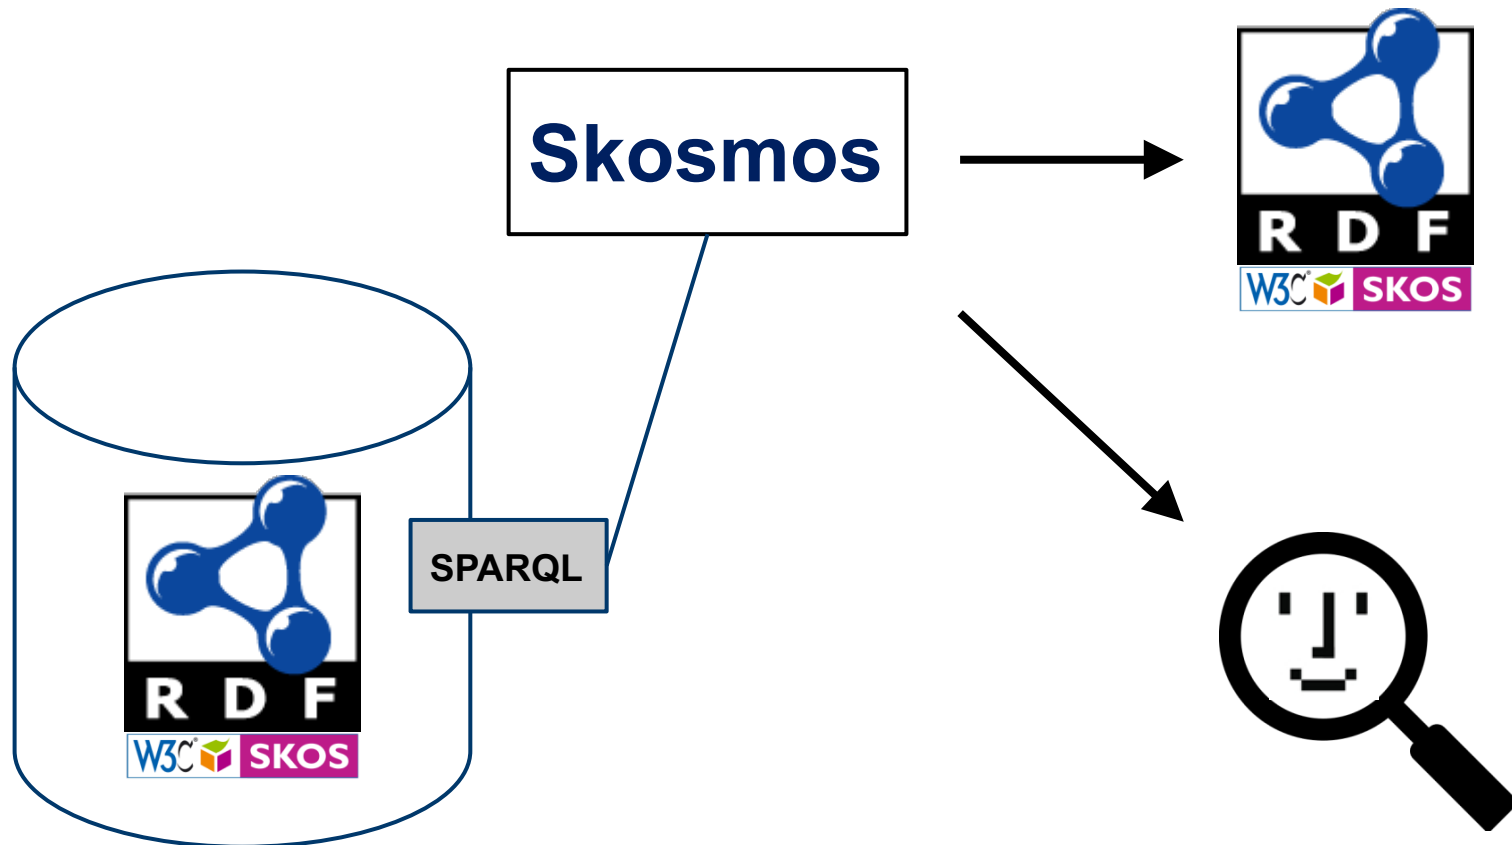

# How does it work?

- Point Skosmos at your SPARQL endpoint

# How does it work?

- And serve your thesaurus for humans, Linked Data agents, and REST API access

# Key features

- Multilingual browser interface (10 languages)
  - Autocomplete search
  - Alphabetical index
  - Concept hierarchy display
  - Concept groups (thematic index)
  - New concepts
- REST API for enabling use of vocabularies in other applications
  - responses usually JSON-LD

# Skosmos around the world

UN	FAO: Skosmos used for publishing <a href="#">AGROVOC</a> <a href="#">GACS project</a> (FAO, CABI (UK), NAL (USA)) is using Skosmos UNESCO is using Skosmos for publishing its thesaurus
Germany	Rheinland-Pfalz spatial data infrastructure: <a href="#">publishing classifications</a> German National Library of Economics (ZBW) North Rhine-Westphalia university library centre (HBZ-NRW): <a href="#">publishing classifications</a>
France	Institute for Demographic Studies INED: publishing Demovoc thesaurus Sparna (helping UNESCO and INED in deploying Skosmos)
Italy	University of Tor Vergata (developers of VocBench thesaurus editor)
Austria	University of Vienna, <a href="#">Phaidra</a> project
Norway	Oslo University Library <a href="#">Norwegian General Thesaurus</a> project

# Summary

- Promoting the importance of descriptive metadata done using controlled, linked vocabularies
  - Interoperability is key
- Providing tools and processes for developing, publishing and using vocabularies in the production of descriptive metadata
- Building solutions on a national scale for the whole public sector
  - Utilizing library know-how
